

Board bag: How to prepare it!

Introduction

Packing is an art form, balancing what you absolutely must bring with you and what you don't. You also need to consider possible repairs based on the availability of products on site.

Beware of excess weight. It is essential to travel with a scale. The tolerance margin is always at least 1 kilo. If the limit is 23 kg, it can go up to 24 kg. It is possible to take the risk of adding material to your baggage between check-in and going to the oversized shipment counter.

Next comes the fragility of the equipment and how to protect it and keep your fingers crossed that it arrives at its destination.

In Switzerland, the Airport service will collect your luggage from your home and handle transportation and check-in for a reasonable price (this service is limited to certain airlines such as SWISS and KLM). Alternatively, bring a two-franc coin for the trolleys. Take this time as mental preparation and a moment of celebration before the adventure begins.

Anticipation

Before purchasing your plane ticket, check the price of oversized baggage as well as the price of additional kilos. For example: Emirates: included in the price: 2 x 23 kilos with no size limits, KLM: Boardbag at 220.- one-way, 80.- each suitcase. RAM: the boardbag is free if you call and if you specify Kite, surfing remains chargeable.

It is often necessary to reserve the location by calling the company a few days before departure.

Anticipating the last purchases of equipment in advance to avoid the stress of missed delivery before departure, I know this subject very well!

Boardbag Rocket, 2 meters

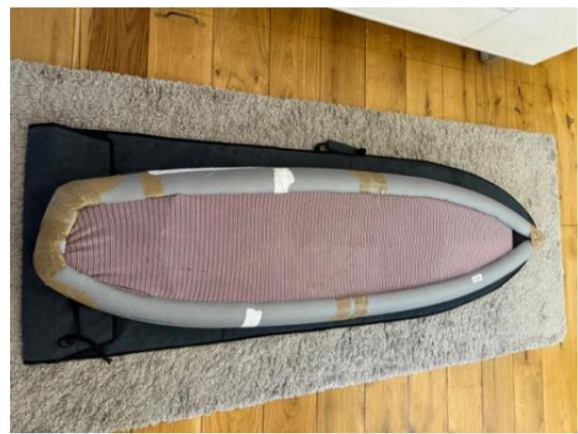

Prepare the board with a name sticker, two Swiss flags and a discreet FLOWSURFING!

FLOWSURFING WINGFOIL TIPS

Take the day-use cover of the float, unscrew the decompression screw if there is one (put a distinctive mark so as not to forget to screw it back in). Remove the end of the Dyneema leash (can mark the board with the pressure of other objects). Put on a sock (for the board not for you...), machine insulation foams to enclose the board (do not forget to cut the sticky part of the foam with a cutter, it would leave marks very difficult to remove...)

The boardbag is tailor-made, ladies and gentlemen. It is made of Kevlar and aramid with Ri-Ri Swiss zippers. The custom size allows it to adapt to the shapes of the chosen board configuration. It weighs only 2 kilos (about 6 kilos for a classic bag). Line the bottom with bubble wrap. Stack the boards in their covers. Beat the eggs. Put neoprene and the harness on the ends. Add wings or other items like booms to reach the weight limit. These custom-made boardbags are available at FLOWSURFING. They are very expensive. You have to be very picky to be eligible for purchase. Only the craziest will be allowed to enter the closed circle of lucky owners. This high-end luggage is guaranteed for life.

Biggie Mat-foil, 90 centimeters

This luggage, with this size, fits like a suitcase, so there is no extra cost. It accommodates masts, foils, and various accessories. This faithful companion is called BIGGIE. It has a volume of 180 liters (92x58x34). It has no wheels, which means it weighs no more than 2 kilos.
